

While wearing gloves, replace all four reservoir filters.

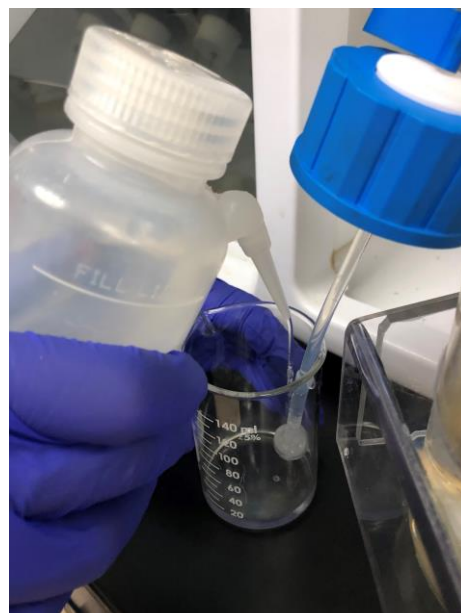

1. Open the reservoir door.

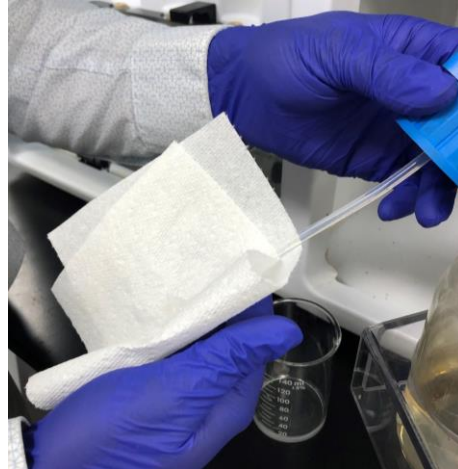

2. Unscrew one of the reservoir caps and place into a beaker.

3. Rinse the tube and filter using distilled water.

4. Dry the tube and container filter.

5. Hold the larger diameter tube at the end of the dip tube and pull the container filter out.

6. Take the new container filter and insert it into the end of the tube. Push firmly until the barb is completely inside.
