

NOTICE: If ordered separately as an RF45 Programmed RF Chip w/ Antenna or within an RF1 Gas Production Module you will notice a new upgraded 2.4 GHz antenna which provides superior RF field containment, resulting in better range and less interaction with surrounding components. This antenna design allows it to be disconnected from the RF chip. Use caution when removing the battery from the module or servicing other components. Should the antenna become disconnected from the RF chip it can simply be snapped back in place.
